

# Remote Testing Service

Locally managed,  
remotely delivered.

Functional Testing  
Test Automation } *as a Service*

Each project is made up of a local Test Manager and a team of remote Test Engineers, based on your project requirements.

## Test Manager (local)

Your primary contact for all functional testing and test automation services. The Test Manager commits 1 hour per day to scheduling resources and various other management and administrative tasks related to your project.

## Test Engineers (remote)

Our team of spriteCloud remote Test Engineers are committed to 8 hours per day of meeting your testing requirements from our technology office in Kiev. Our test engineers are industry certified practitioners with commercial experience testing web and mobile applications.

*“It’s fast, it’s agile, and it’s only what you need.”*

## Amsterdam, Kiev and the Cloud

Our test managers are based locally in Amsterdam, our test engineers are based remotely in our technology office in Kiev. Your test results are delivered via the cloud using our universal test reporting dashboard solution, Calliope.pro.

With spriteCloud’s remote testing service, you get our software testing expertise while only buying the time you need for a significantly more cost-effective price than a local resource solution. No more committing to hiring testers only for unplanned schedule changes in the project which force this costly resource to lay idle.

Calliope bridges the gap between testers, developers and project managers by allowing for each stakeholder to share, compare, and monitor test results.

Your development team can stay on one page by:

- Reporting all test results in a centralized point for all to see.
- Sharing error reports and screenshots amongst team members for quick action.
- Visualizing test results over time for quick health assessments.
- Increase collaboration with all stakeholders aware of the health of the project.

## Flat Rates and No End Dates

Our remote testing services are meant to simplify testing so we offer flat rates for our remote services and the possibility for projects to continue without end dates, for when you need that added flexibility.

### Functional Testing

- Minimum project length: 1 day
- Minimum request time: 2 days

### Test Automation

- Minimum project length: 1 week
- Minimum request time: 1 week
